

목차 (Table of Contents)

서문 (Preface)

1부: 기초 AI (Part 1: Basic AI)

1장: AI 개론 (Chapter 1: Introduction to AI)

- AI의 이해 (Understanding AI)
- 비디오 게임에서의 AI (AI in video games)
- 비디오 게임을 위한 AI 기법 (AI techniques for video games)
- 유한 상태 기계 (Finite state machines)
- AI에서의 무작위성과 확률 (Randomness and probability in AI)
- 센서 시스템 (The sensor system)
- 플로킹(군집), 스워밍(무리), 허딩(몰이) (Flocking, swarming, and herding)
- 경로 추종 및 조향 (Path following and steering)
- A 길찾기 (A pathfinding)
- 내비게이션 메쉬 (Navigation meshes)
- 행동 트리 (Behavior trees)
- 로코모션/이동 처리 (Locomotion)
- 요약 (Summary)

2장: 유한 상태 기계 (Chapter 2: Finite State Machines)

- 기술적 요구 사항 (Technical requirements)
- 플레이어 탱크 구현 (Implementing the player's tank)
- Tank 객체 초기화 (Initializing the Tank object)
- 발사체 사격 (Shooting the bullet)
- 탱크 제어 (Controlling the tank)
- Bullet 클래스 구현 (Implementing a Bullet class)
- 웨이포인트(경유지) 설정 (Setting up waypoints)
- 추상 FSM 클래스 생성 (Creating the abstract FSM class)
- 적 탱크 AI를 위한 단순 FSM 적용 (Using a simple FSM for the enemy tank AI)
- 순찰(Patrol) 상태 (The Patrol state)
- 추적(Chase) 상태 (The Chase state)
- 공격(Attack) 상태 (The Attack state)
- 사망(Dead) 상태 (The Dead state)
- 피격 처리 (Taking damage)
- FSM 프레임워크 사용 (Using an FSM framework)

- AdvancedFSM 클래스 (The AdvancedFSM class)
- FSMState 클래스 (The FSMState class)
- 상태 클래스들 (The state classes)
- NPCTankController 클래스 (The NPCTankController class)
- 요약 (Summary)

3장: 무작위성과 확률 (Chapter 3: Randomness and Probability)

- 기술적 요구 사항 (Technical requirements)
- Unity 내 무작위성 도입 (Introducing randomness in Unity)
- 컴퓨터 과학에서의 무작위성 (Randomness in computer science)
- Unity Random 클래스 (The Unity Random class)
- 간단한 무작위 주사위 게임 (A simple random dice game)
- 확률의 기초 학습 (Learning the basics of probability)
- 독립 사건과 상관 사건 (Independent and correlated events)
- 조건부 확률 (Conditional probability)
- 조작된 주사위 (Loaded dice)
- 게임 내 확률의 추가 사례 탐구 (Exploring more examples of probability in games)
- 캐릭터 성향 (Character personalities)
- 인지된 무작위성 (Perceived randomness)
- 확률을 적용한 FSM (FSM with probability)
- 동적 AI 스킬 적응 (Dynamically adapting AI skills)
- 슬롯머신 제작 (Creating a slot machine)
- 무작위 슬롯머신 (A random slot machine)
- 가중 확률 (Weighted probability)
- 근접 실패 / 아차 사고 (A near miss)
- 요약 (Summary)
- 추가 참고 문헌 (Further reading)

4장: 센서 구현 (Chapter 4: Implementing Sensors)

- 기술적 요구 사항 (Technical requirements)
- 기본 감각 시스템 (Basic sensory systems)
- 씬(Scene) 설정 (Setting up our scene)
- 플레이어 탱크와 Aspect 클래스 (The player's tank and the aspect class)
- 플레이어 탱크 (The player's tank)
- 애스펙트 (Aspect)
- AI 캐릭터 (AI characters)
- 감각 (Sense)

- 시각 (Sight)
- 촉각 (Touch)
- 게임 테스트 (Testing the game)
- 요약 (Summary)

2부: 이동과 내비게이션 (Part 2: Movement and Navigation)

5장: 플로킹 / 군집 행동 (Chapter 5: Flocking)

- 기술적 요구 사항 (Technical requirements)
- 기본 플로킹 행동 (Basic flocking behavior)
- 개별 행동 (Individual behavior)
- 컨트롤러 (Controller)
- 대안적 구현 (Alternative implementation)
- FlockController (FlockController)
- 요약 (Summary)

6장: 경로 추종 및 조향 행동 (Chapter 6: Path Following and Steering Behaviors)

- 기술적 요구 사항 (Technical requirements)
- 경로 추종 (Following a path)
- Path 스크립트 (Path script)
- 경로 추종 에이전트 (Path-following agents)
- 장애물 회피 (Avoiding obstacles)
- 사용자 지정(Custom) 레이어 추가 (Adding a custom layer)
- 장애물 회피 (Obstacle avoidance)
- 요약 (Summary)

7장: A 길찾기 (Chapter 7: A Pathfinding)**

- 기술적 요구 사항 (Technical requirements)
- A 알고리즘 재검토 (*Revisiting the A algorithm*)
- A 알고리즘 구현 (*Implementing the A algorithm*)
- 노드 (Node)
- 우선순위 큐 (PriorityQueue)
- GridManager 클래스 (The GridManager class)
- AStar 클래스 (The AStar class)
- TestCode 클래스 (The TestCode class)
- 씬 설정 (Setting up the scene)
- 길찾기 알고리즘(Pathfinder) 테스트 (Testing the pathfinder)
- 요약 (Summary)

8장: 내비게이션 메쉬 / NavMesh (Chapter 8: Navigation Mesh)

- 기술적 요구 사항 (Technical requirements)
- 맵 설정 (Setting up the map)
- 내비게이션 정적(Static) 처리 (Navigation static)
- 내비게이션 메쉬 베이킹 (Baking the NavMesh)
- NavMesh 에이전트 (NavMesh agent)
- 에이전트의 목적지 업데이트 (Updating an agent's destinations)
- 경사면이 있는 씬 설정 (Setting up a scene with slopes)
- 비용(Cost)이 다른 내비게이션 영역 베이킹 (Baking navigation areas with different costs)
- 오프 메쉬 링크(Off Mesh Link)를 활용한 영역 간 단절 구간 연결 (Using Off Mesh Links to connect gaps between areas)
- 자동 생성 오프 메쉬 링크 (Generated Off Mesh Links)
- 수동 오프 메쉬 링크 (Manual Off Mesh Links)
- 요약 (Summary)

3부: 고급 AI (Part 3: Advanced AI)

9장: 행동 트리 (Chapter 9: Behavior Trees)

- 기술적 요구 사항 (Technical requirements)
- 행동 트리(BT) 개론 (Introduction to BTs)
- 간단한 예제 – 순찰 로봇 (A simple example – a patrolling robot)
- Behavior Bricks를 활용한 Unity 내 BT 구현 (Implementing a BT in Unity with Behavior Bricks)
- 씬 설정 (Set up the scene)
- 주야간(Day/Night) 사이클 구현 (Implement a day/night cycle)
- 적 행동 설계 (Design the enemy behavior)
- 노드 구현 (Implementing the nodes)
- 트리 구축 (Building the tree)
- 적에게 BT 부착 (Attach the BT to the enemy)
- 요약 (Summary)
- 추가 참고 문헌 (Further reading)

10장: 절차적 콘텐츠 생성 (Chapter 10: Procedural Content Generation)

- 기술적 요구 사항 (Technical requirements)
- 게임 내 절차적 콘텐츠 생성(PCG)의 이해 (Understanding Procedural Content Generation in games)
- 절차적 콘텐츠 생성의 종류 (Kinds of Procedural Content Generation)
- 간단한 고블린 이름 생성기 구현 (Implementing a simple goblin name generator)

- 고블린 이름 생성 (Generating goblin names)
- 고블린 설명 완성 (Completing the goblin description)
- 펄린 노이즈(Perlin Noise) 사용법 학습 (Learning how to use Perlin noise)
- Unity 내장 펄린 노이즈 (Built-in Unity Perlin noise)
- 무작위 맵 및 동굴 생성 (Generating random maps and caves)
- 셀룰러 오토마타 (Cellular automata)
- 동굴 생성기 구현 (Implementing a cave generator)
- 생성된 동굴 렌더링 (Rendering the generated cave)
- 요약 (Summary)
- 추가 참고 문헌 (Further reading)

11장: Unity에서의 머신러닝 (Chapter 11: Machine Learning in Unity)

- 기술적 요구 사항 (Technical requirements)
- Unity 머신러닝 에이전트 툴킷 (The Unity Machine Learning Agents Toolkit)
- ML-Agents 툴킷 설치 (Installing the ML-Agents Toolkit)
- Windows에 Python 및 PyTorch 설치 (Installing Python and PyTorch on Windows)
- macOS 및 Unix 계열 시스템에 Python 및 PyTorch 설치 (Installing Python and PyTorch on macOS and Unix-like systems)
- ML-Agents 툴킷 사용 – 기본 예제 (Using the ML-Agents Toolkit – a basic example)
- 씬 생성 (Creating the scene)
- 코드 구현 (Implementing the code)
- 마무리 작업 (Adding the final touches)
- 학습 환경 테스트 (Testing the learning environment)
- 에이전트 훈련 (Training an agent)
- 요약 (Summary)
- 추가 참고 문헌 (Further reading)

12장: 종합하기 (Chapter 12: Putting It All Together)

- 기술적 요구 사항 (Technical requirements)
- 기본 게임 구조 개발 (Developing the basic game structure)
- 자동화된 내비게이션 추가 (Adding automated navigation)
- NavMesh 생성 (Creating the NavMesh)
- 에이전트 설정 (Setting up the Agent)
- GameManager 스크립트 수정 (Fixing the GameManager script)
- FSM을 활용한 의사결정(Decision-making) AI 생성 (Creating decision-making AI with FSM)
- 요약 (Summary)

Table of Contents

Preface

Part 1: Basic AI

Chapter 1: Introduction to AI

Understanding AI

AI in video games

AI techniques for video games

Finite state machines

Randomness and probability in AI

The sensor system

Flocking, swarming, and herding

Path following and steering

A* pathfinding

Navigation meshes

Behavior trees

Locomotion

Summary

Chapter 2: Finite State Machines

Technical requirements

Implementing the player's tank

Initializing the Tank object

Shooting the bullet

Controlling the tank

Implementing a Bullet class

Setting up waypoints

Creating the abstract FSM class

Using a simple FSM for the enemy tank AI

The Patrol state

The Chase state

The Attack state

The Dead state

Taking damage

Using an FSM framework

The AdvancedFSM class

The FSMState class

The state classes

The NPCTankController class

Summary

Chapter 3: Randomness and Probability

Technical requirements

Introducing randomness in Unity

Randomness in computer science

The Unity Random class

A simple random dice game

Learning the basics of probability

Independent and correlated events

Conditional probability

Loaded dice

Exploring more examples of probability in games

Character personalities

Perceived randomness

FSM with probability

Dynamically adapting AI skills

Creating a slot machine

A random slot machine

Weighted probability

A near miss

Summary

Further reading

Chapter 4: Implementing Sensors

Technical requirements

Basic sensory systems

Setting up our scene

The player's tank and the aspect class

The player's tank

Aspect

AI characters

Sense

Sight

Touch

Testing the game

Summary

Part 2: Movement and Navigation

Chapter 5: Flocking

Technical requirements

Basic flocking behavior

Individual behavior

Controller

Alternative implementation

FlockController

Summary

Chapter 6: Path Following and Steering Behaviors

Technical requirements

Following a path

Path script

Path-following agents

Avoiding obstacles

Adding a custom layer

Obstacle avoidance

Summary

Chapter 7: A* Pathfinding

Technical requirements

Revisiting the A* algorithm

Implementing the A* algorithm

Node

PriorityQueue

The GridManager class

The AStar class

The TestCode class

Setting up the scene

Testing the pathfinder

Summary

Chapter 8: Navigation Mesh

Technical requirements

Setting up the map

Navigation static

Baking the NavMesh

NavMesh agent

Updating an agent's destinations

Setting up a scene with slopes

Baking navigation areas with different costs

Using Off Mesh Links to connect gaps between areas

Generated Off Mesh Links

Manual Off Mesh Links

Summary

Part 3: Advanced AI

Chapter 9: Behavior Trees

Technical requirements

Introduction to BTs

A simple example – a patrolling robot

Implementing a BT in Unity with Behavior Bricks

Set up the scene

Implement a day/night cycle

Design the enemy behavior

Implementing the nodes

Building the tree

Attach the BT to the enemy

Summary

Further reading

Chapter 10: Procedural Content Generation

Technical requirements

Understanding Procedural Content Generation in games

Kinds of Procedural Content Generation

Implementing a simple goblin name generator

Generating goblin names

Completing the goblin description

Learning how to use Perlin noise

Built-in Unity Perlin noise
